

the 1990s, the number of people with a disability in the United States has increased by 25% (U.S. Census Bureau, 2000).

As a result of the increase in the number of people with a disability, the need for accessible information has become more acute. The National Center for Accessible Information (NCAI) has estimated that the number of people with a disability who are unable to access information is 100 million (NCAI, 2000).

One of the most important areas of accessible information is the area of accessible electronic information. This area is becoming increasingly important as the use of electronic information continues to grow.

The purpose of this paper is to discuss the need for accessible electronic information and to provide a framework for the development of accessible electronic information.

## Background

The need for accessible electronic information is based on the fact that electronic information is becoming increasingly important in our society.

Electronic information is becoming increasingly important in our society because it is becoming increasingly available to a larger number of people.

Electronic information is becoming increasingly important in our society because it is becoming increasingly available to a larger number of people.

## Need

The need for accessible electronic information is based on the fact that electronic information is becoming increasingly important in our society.

Electronic information is becoming increasingly important in our society because it is becoming increasingly available to a larger number of people.

## Framework

The need for accessible electronic information is based on the fact that electronic information is becoming increasingly important in our society.

Electronic information is becoming increasingly important in our society because it is becoming increasingly available to a larger number of people.

## Conclusion

The need for accessible electronic information is based on the fact that electronic information is becoming increasingly important in our society.

Electronic information is becoming increasingly important in our society because it is becoming increasingly available to a larger number of people.

the 1990s, the number of people with a diagnosis of schizophrenia has increased in many countries (Murray & Lopez, 1996).

There is a need to understand the nature of the illness and the reasons for the increase in prevalence. The aim of this study was to explore the experience of people with a diagnosis of schizophrenia, to understand the nature of the illness and the reasons for the increase in prevalence.

## Method

### Design

The study was a phenomenological study, which is a type of qualitative research that aims to understand the nature of an experience (Merrell, 1998).
